

Your mail is our strength

modular, mixed mail, vertical feeding system

jetmail

The most

JetMail Modular Design

The most innovative and efficient postage meter system of its kind.

The JetMail system is totally modular.

Components like the automatic feeder, active scales and Karat software can be added as your needs grow.

Loading postage is simple. JetMail has an internal modem which connects to the FP-Teleset service to load postage at the touch of a button.

Ink-jet printing

The fully electronic print head never touches the envelope surface delivering clean crisp franks that dry on contact, this makes JetMail quiet enough for every office.

The cliché can be changed at the touch of a button, what's more you can have up to 9 advertising slogans and 9 types of mail clichés with more on the JetMail card.

Quiet Feeder

JetMail feeds letters vertically like large mailsorting machines, now you can have genuine 'mixed mail' feeding plus reloading without interruption.

Incredibly quiet, less than 60dB(A).

JetMail can handle items up to 20mm thick including Jiffy Bags and large items like C4 (A4 flat) mailings.

Clean crisp

Coded JetMail card

The JetMail Card System

Only people provided with a coded JetMail card are authorised to use JetMail - it is locked for unauthorised persons. Up to fifty departmental accounts can be equipped with JetMail cards. When the postal service changes its rates, simply insert a new card loaded with the new rates and JetMail does the rest.

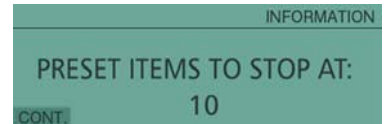

JetMail offers security and flexibility.

User Friendly Control Panel and Display

Multi-purpose

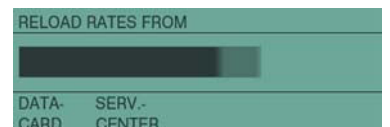

The multi-purpose display makes JetMail one of the easiest postage meters in the world to use with step-by-step screen prompts, error messages and account functions.

- Automatic time and date setting
- Total items and amounts for different departments
- 'High postage' and 'low postage remaining' warnings
- Frequently used postage settings can be stored
- Select from nine stored advertising slogans (more on card)

Label Dispenser

For larger packages, simply enter the number of labels you need printed and press the label key. JetMail automatically feeds and prints the quantity of labels.

Karat software - linking JetMail to your computer

Karat Software

The complete system can be interfaced to Karat (the postage management control and accounting system) for analysis of postage via accounting software. You can connect up to eight separate units for central analysis, providing unlimited accounts and charges from other carriers. Karat's main screen has optional function key shortcuts and help files.

Eight separate

- Management screen for configuration
- 'Cost centre' for surcharges/discounts
- Running display
- Customised reports
- Barcode reader interface

jetmail

- Real mixed mail feeding
- Unique vertical feeding system
- Smudge-free digital inkjet printing
- Super quiet feeder
- JetMail security card
- Advertising blocks on JetMail card
- Handles items up to 20mm thick
- Handles Jiffy bags
- Internal modem
- Integrated accounting

Dynamic Scales

The JetMail Dynamic Scales weigh every piece of unsorted mail automatically, calculating the correct postage "on the move" and transmitting the information to the postage meter which calculates the correct postage and immediately franks the envelope.

Items up to 20mm thick, including Jiffy bags, can be loaded without interrupting the franking operation.

Integrated Static Scales

The integrated scale allows you to select the class of service and then automatically sets the postage rate. It can be used for items up to 5kg and measures in 1g increments.

- Real mixed mail feeding
